

HOW TO CREATE AN AGGREGATE DEVICE

1. Introduction

This guide describes how to create an Aggregate Device under Mac OS 10.X. Therefore, this guide especially covers the iAXE and UCG series in combination with enclosed applications, such as Native Instruments Guitar Combos.

1.1 What is an Aggregate Device?

An Aggregate Device is a virtual device driver for Mac OS, that ensures communication between the software (audio application) and the hardware. With Aggregate Devices it is possible to combine different physical inputs and outputs and treat them like one virtual device.

The *Apple Aggregate Device Editor* allows you to create custom Aggregate Devices by grouping individual devices and channels. If necessary, check the respective documentation.

2. Setup

To create an Aggregate Device, proceed as follows:

- 1) Connect your BEHRINGER hardware via USB.
- 2) Launch *Finder* on your Mac.
- 3) Select *Utilities* from the *Go* menu.
- 4) Launch *Audio MIDI Setup*.
- 5) From the *Finder* menu choose *Audio/Open Aggregate Device Editor*.

Fig. 2.1: Aggregate Device Editor

- 6) Click + to add an Aggregate Device on your computer.
- 7) Double-click on the highlighted text to enter a new name for your aggregate device.
- 8) Select the devices that you wish to add to your Aggregate Device.

- 9) Click on the *Done* button.

Now you are ready to make use of your new Aggregate Device within your music application.
