MIDI Synth

LINK.midi 4x4

Typical MIDI Studio Setup

This diagram demonstrates a typical MIDI studio setup. The USB port on the Link.MIDI 4x4 is connected to a computer running MIDI sequencing and music production software. The MIDI ports on a keyboard are connected to I/O 1 on the Link.MIDI 4x4, and a MIDI synthesizer is connected to I/O 2. You might connect a MIDI control surface to I/O 3, which can be used to control various functions in the software application. I/O 4 could be used for connecting a second MIDI synthesizer, drum pads, or a wind controller.
