

Thanks for buying the Morley® Distortion Boost

The Distortion Boost is an analog overdrive style distortion. It works great as a standalone distortion but also to enhance your amp's distortion.

The handy Boost feature allows you to boost the overall signal 20dB (when in distortion mode) for solos or when ever you need to be louder.

CONNECTIONS: The Distortion Boost powers from one 9V battery or optional Morley Adapter (DC jack is located next to INPUT jack). Using a standard guitar cable, simply plug guitar into INPUT jack, connect a standard guitar cable from the OUTPUT jack to the Input of your amplifier.

FUNCTIONS AND FEATURES: The right side switch turns on/off the distortion. The LED will light when distortion is turned on. There are three knobs that control distortion sound;

DRIVE: Controls distortion from mild overdrive to cranked amp distortion.

TONE: Controls tone of distortion.

LEVEL: Controls the overall loudness of the distortion

The left side switch engages the BOOST. The boost only works when you are in distortion mode. Left side LED lights when Boost is on. The level of the boost is preset at 20dB. The Drive, Tone and Level knobs still functional in Boost mode.

This product is warranted for two years from date of purchase with a copy of your purchase receipt. To obtain warranty service, please contact Morley® customer service at tech@morleypedals.com
