ALWAYS OBSERVE THE FOLLOWING

WARNING

- Before using this unit, make sure to read the instructions below, and the Owner's Manual. 
- Do not open or perform any internal modifications on the unit. 
- Do not attempt to repair the unit, or replace parts within it (except when this manual provides specific instructions directing you to do so). Refer all servicing to your retailer, the nearest Roland Service Center, or an authorized Roland distributor, as listed on the "Information" page. 
- Never use or store the unit in places that are: 
 - Subject to temperature extremes (e.g., direct sunlight in an enclosed vehicle, near a heating duct, on top of heat-generating equipment); or are 
 - Damp (e.g., baths, washrooms, on wet floors); or are
 - Humid; or are
 - Exposed to rain; or are
 - Dusty; or are
 - Subject to high levels of vibration.
- Make sure you always have the unit placed so it is level and sure to remain stable. Never place it on stands that could wobble, or on inclined surfaces. 

- This unit, either alone or in combination with an amplifier and headphones or speakers, may be capable of producing sound levels that could cause permanent hearing loss. Do not operate for a long period of time at a high volume level, or at a level that is uncomfortable. If you experience any hearing loss or ringing in the ears, you should immediately stop using the unit, and consult an audiologist. 
- Do not allow any objects (e.g., flammable material, coins, pins); or liquids of any kind (water, soft drinks, etc.) to penetrate the unit. 

- Immediately turn the power off, and request servicing by your retailer, the nearest Roland Service Center, or an authorized Roland distributor, as listed on the "Information" page when: 
 - Objects have fallen into, or liquid has been spilled onto the unit; or
 - The unit has been exposed to rain (or otherwise has become wet); or
 - The unit does not appear to operate normally or exhibits a marked change in performance.
- In households with small children, an adult should provide supervision until the child is capable of following all the rules essential for the safe operation of the unit. 

- Protect the unit from strong impact.
(Do not drop it!)

- DO NOT play a CD-ROM disc on a conventional audio CD player. The resulting sound may be of a level that could cause permanent hearing loss. Damage to speakers or other system components may result.

⚠ CAUTION

- Try to prevent cords and cables from becoming entangled. Also, all cords and cables should be placed so they are out of the reach of children.

- Never climb on top of, nor place heavy objects on the unit.

- Disconnect all cords coming from external devices before moving the unit.

- Should you remove the optical connector caps, make sure to put them in a safe place out of children's reach, so there is no chance of them being swallowed accidentally.

IMPORTANT NOTES

In addition to the items listed under “USING THE UNIT SAFELY” on page 2, please read and observe the following:

Power Supply

- Before connecting this unit to other devices, turn off the power to all units. This will help prevent malfunctions and/or damage to speakers or other devices. (It is not necessary to turn off the power of your computer.)

Placement

- Using the unit near power amplifiers (or other equipment containing large power transformers) may induce hum. To alleviate the problem, change the orientation of this unit; or move it farther away from the source of interference.
- This device may interfere with radio and television reception. Do not use this device in the vicinity of such receivers.
- Do not expose the unit to direct sunlight, place it near devices that radiate heat, leave it inside an enclosed vehicle, or otherwise subject it to temperature extremes. Excessive heat can deform or discolor the unit.
- To avoid possible breakdown, do not use the unit in a wet area, such as an area exposed to rain or other moisture.

Maintenance

- For everyday cleaning wipe the unit with a soft, dry cloth or one that has been slightly dampened with water. To remove stubborn dirt, use a cloth impregnated with a mild, non-abrasive detergent. Afterwards, be sure to wipe the unit thoroughly with a soft, dry cloth.
- Never use benzine, thinners, alcohol or solvents of any kind, to avoid the possibility of discoloration and/or deformation.

Additional Precautions

- Use a reasonable amount of care when using the unit’s buttons, sliders, or other controls; and when using its jacks and connectors. Rough handling can lead to malfunctions.
- When connecting / disconnecting all cables, grasp the connector itself—never pull on the cable. This way you will avoid causing shorts, or damage to the cable’s internal elements.
- To avoid disturbing your neighbors, try to keep the unit’s volume at reasonable levels. You may prefer to use headphones, so you do not need to be concerned about those around you (especially when it is late at night).
- When you need to transport the unit, package it in the box (including padding) that it came in, if possible. Otherwise, you will need to use equivalent packaging materials.
- Use a cable from Roland to make the connection. If using some other make of connection cable, please note the following precautions.
 - Some connection cables contain resistors. Do not use cables that incorporate resistors for connecting to this unit. The use of such cables can cause the sound level to be extremely low, or impossible to hear. For information on cable specifications, contact the manufacturer of the cable.
- Before you open the included CD-ROM, you must read the “license agreement.” Opening the CD-ROM will be taken to mean your acceptance of the license agreement.

Handling CD-ROMs

- Avoid touching or scratching the shiny underside (encoded surface) of the disc. Damaged or dirty CD-ROM discs may not be read properly. Keep your discs clean using a commercially available CD cleaner.

You must read this before you use digital recording

Unauthorized recording, distribution, sale, lending, public performance, broadcasting, or the like, in whole or in part, of a work (musical composition, video, broadcast, public performance, or the like) whose copyright is held by a third party is prohibited by law.

When exchanging audio signals through a digital connection with an external instrument, this unit can perform recording without being subjected to some of the restrictions of the Serial Copy Management System (SCMS). This is because the unit is intended solely for musical production, and is designed not to be subject to restrictions as long as it is used to record works (such as your own compositions) that do not infringe on the copyrights of others. (SCMS is a feature that prohibits second-generation and later copying through a digital connection. It is built into MD recorders and other consumer digital-audio equipment as a copyright-protection feature.)

On the UA-3

The UA-3 will function with partial SCMS support only for a digital input signal from an external device. When data containing SCMS flags is input, for example from a MD that was digitally copied from a commercial music CD, the UA-3 will function as follows.

If input from the UA-3's digital input connector:

- The UA-3 cannot record this data to your computer
- The audio will be output from the analog outputs (line output jacks, headphone jack) and digital output connector.

If input from the UA-3's analog inputs (line input jacks):

- Recording can occur normally

Regardless of the presence or absence of the SCMS flag, data that is received at the digital input connector of the UA-3 will be output directly from the digital output connector

Do not use this unit for purposes that could infringe on a copyright held by a third party. Roland assumes no responsibility whatsoever with regard to any infringements of third-party copyrights arising through your use of this unit.

This device does not support digital audio signals that are formatted for broadcast studio digital audio devices.

The UA-3 operates according to SCMS only for digital input signals from an external device. SCMS flags are not added to the digital audio signals that are output from the UA-3.

Introduction

Check the contents of the package

The UA-3 includes the following items. When you open the package, first make sure that all items are included. If any are missing, contact the dealer where you purchased the UA-3.

UA-3

USB cable

Use this to connect the UA-3 to the USB connector of your computer. For details on connections, refer to **Connections and driver installation** (Windows p. 10, Macintosh p. 24).

NOTE

Use only the included USB cable.

NOTE

Before opening the included CD-ROM, you must read the separate license agreement.

NOTE

Do not touch the silver recording surface of the disc, or scratch it. Doing so may make it impossible for data to be read correctly. If the disc becomes soiled, use a commercially available CD cleaner to clean it.

AUDIO Capture CD-ROM

This contains software that you will need in order to use the UA-3.

- * *Be sure to read the Readme_E.txt file found in the AUDIO Capture CD-ROM. Any updated information will be provided in the Readme_E.txt file.*

Do not play back the CD-ROM on a conventional audio CD player. Doing so will produce a high volume that may damage your ears or speakers.

Getting Started

This is the document you are reading. Keep it at hand for reference when needed.

License agreement

This contract describes the terms under which Roland Corporation allows you to use the software. You must read this before opening the CD-ROM package.

You will need to provide these items yourself

External amp, speakers, headphones, and mic are not included

External amp, speakers, or headphones necessary for listening to the sound output via the UA-3 are not included. Nor is a mic included for inputting sound to the UA-3. You will need to provide these items yourself.

Digital input/output cables for connecting the MD or DAT recorder are not included

Although you can use an MD or DAT digital recorder to perform digital recording, the cables for connecting the recorder to the UA-3 are not included. You will need to provide these separately.

Parts of the UA-3 and their function

- 1 Mic input jack
- 2 Line input jacks
- 3 Line output jacks
- 4 Digital input connector (optical)
- 5 Digital output connector (optical)

17 Headphone jack

A set of headphones can be connected here. Even if headphones are connected, sound will still be output from the **Line output jacks** **3**.

For details on how each control and connector are actually used, refer to **UA-3 Application Guide** (p. 29).

Connections and driver installation (Windows)

* If you are a Macintosh user, refer to p. 24.

In order to use the UA-3, you must first install the **USB Composite Device** driver, the **USB Human Interface** driver, and the **USB Audio Device** driver consecutively. These drivers are included with Windows. If you are using Windows 98, this driver is provided in the **Microsoft Windows CD-ROM**, so you will need to have the **Microsoft Windows CD-ROM** ready. If you are using Windows Me or 2000, the CD-ROM is not necessary.

What is a driver?

A driver is software that allows an application program running on your computer to transfer data to and from the UA-3 when it is connected to your computer via a USB cable. The driver passes data from the application to the UA-3, and passes data from the UA-3 to the application.

Before installing the driver

The UA-3 cannot be used with Windows 95 or Windows NT.

If other Windows programs are running, exit all of them before you continue.

If you will be simultaneously connecting multiple Roland USB devices (for example; the UA-3 and other USB devices such as the UA-100G) to your computer, disconnect the UA-100G or other devices from the USB connector before installing the driver. If you install the driver when the UA-100G or other devices are connected, installation may not occur correctly.

Making connections and installing the driver

■ Making connections

Always make sure to have the volume level turned down before connecting the UA-3. Even with the volume all the way down, you may still hear some sound when the power is switched on, but this is normal, and does not indicate a malfunction.

To prevent malfunction and/or damage to speakers or other devices, always turn down the volume, and turn off the power of all devices before making any connections. (It is not necessary to turn off the power of your computer.) Use a USB cable to connect the UA-3 to your computer before turning on the power of your audio equipment.

NOTE

Before disconnecting the USB cable or restarting Windows, please close all applications. You should also turn down the volume of any audio or amp system that is connected.

NOTE

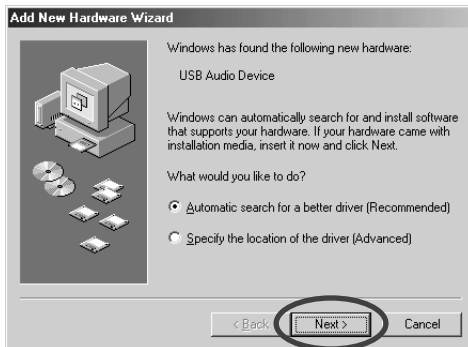

This unit is equipped with a protection circuit. A brief interval (a few seconds) after connecting a USB connector is required before the unit will operate normally.

■ Installing the driver (Windows Me)

* If you are using a Windows 2000 machine, refer to p. 12, if Windows 98, refer to p. 13.

1. Turn on the power of your computer and start up Windows, and use a USB cable to connect the UA-3 to your computer.

2. When Windows detects the UA-3 and the **Add New Hardware Wizard** dialog box appears, make sure “**Automatic search for a better driver (Recommended)**” is selected, then click **[Next]**.

NOTE

Some time may be required until this dialog box appears.

3. The search for the driver starts.
4. When the correct driver is found, driver installation starts.
5. When a dialog box informing you that driver installation has finished appears, click **[Finish]**, and restart Windows.

After installing the driver, refer to **Specifying the audio input/output device** (p. 17) and select the device Windows uses.

* *Depending on your computing setup, there may be a short wait after the driver is installed until the device is recognized.*

■ Installing the driver (Windows 2000)

* *If you are using a Windows Me machine, refer to p. 11, if Windows 98, refer to p. 13.*

1. Turn on the power of your computer and start up Windows.
2. Use a USB cable to connect the UA-3 to your computer.
The UA-3 is recognized to the computer and the driver is installed all automatically.
3. After installing the driver, restart Windows.

■ Installing the driver (Windows 98)

* If you are using a Windows Me machine, refer to p. 11, if Windows 2000, refer to p. 12.

Installation must be performed in the order of the **USB Composite Device** driver, **USB Human Interface Device** driver, and then the **USB Audio Device** driver. Use the following procedure to perform the installation.

1. Turn on the power of your computer and start up Windows. Insert the **Microsoft Windows CD-ROM** into your CD-ROM drive, and use a USB cable to connect the UA-3 to your computer (p. 11).

Since some computers are sold with the contents of the **Microsoft Windows CD-ROM** already in the hard disk, a **Microsoft Windows CD-ROM** may not have been included. If this is the case, you will be able to install the driver without the **Microsoft Windows CD-ROM**.

A **USB Composite Device** will be detected automatically, and the **Add New Hardware Wizard** dialog box will appear. Click **[Next]**.

If this dialog box does not appear, refer to **Problems related to the USB driver** (p. 36).

2. When the display asks “**What do you want Windows to do?**”, select “**Search for the best driver for your device. (Recommended).**” and click **[Next]**.

Connections and driver installation (Windows)

3. The following dialog box will appear. Check **CD-ROM drive**, and click **[Next]**.

4. The following dialog box will appear. Click **[Next]**.

* Depending on your system, the **Location of driver** may differ from the above illustration, but this is not a problem.

5. Copying of the file (Driver) will begin.

If the **Microsoft Windows CD-ROM** is not inserted in the CD-ROM drive, the following dialog box may appear. If this occurs, insert the **Microsoft Windows CD-ROM** into the CD-ROM drive, and click **[OK]**.

- When installation of the **USB Composite Device** driver is finished, the following dialog box will appear. Click **[Finish]**.

- Then, the **USB Human Interface Device** will automatically be detected, and the **Add New Hardware Wizard** dialog box will appear. Click **[Next]**, and continue the installation using the very same procedure as steps 2--5 (p. 13--14).

- When installation of the **USB Human Interface Device** driver is finished, the following dialog box will appear. Click **[Finish]**.

MEMO

In step 4, the screen will indicate “Windows driver file search for the device : USB Human Interface Device.”

9. Next, a **USB Audio Device** will be detected automatically, and the **Add New Hardware Wizard** dialog box will appear. Click **[Next]**, and continue the installation using the very same procedure as in steps 2 -- 5 (p.13 -- 14).

10. When installation of the **USB Audio Device** driver is finished, the following dialog box will appear. Click **[Finish]**.

This completes installation of the **USB Composite Device** driver, the **USB Human Interface Device** driver, and the **USB Audio Device** driver. Restart Windows.

After installing the driver, refer to **Specifying the audio input/output device** (p. 17) and select the device Windows uses.

MEMO

In step 4, the screen will indicate “Windows driver file search for the device : USB Audio Device.”

5. For the **Recording** item **Preferred device**, click . In the list that appears, click **[USB Audio Device]** to select it.

Windows 98 / Windows 98SE

Windows 2000 / Windows Me

6. Click **[OK]** to complete the settings.

MEMO

Depending on your system, "USB Audio Device" will be shown a number added, ex. "USB Audio Device (1)."

MEMO

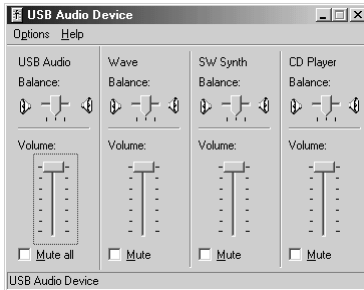

It will not be possible to press the "Advanced Properties" button for "Recording."

Volume Control settings

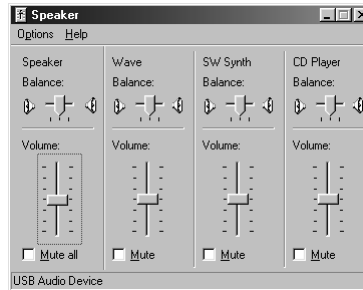

The output volume of the UA-3 can be controlled by the Windows **Volume Control**.

1. Click the Windows **[Start]** button, and select **[Programs]** - **[Accessories]** - **[Entertainment]** - **[Volume Control]** to start it up.

Windows Me

Windows 2000/ Windows 98/Windows 98SE

2. You can raise or lower the slider to adjust the volume of the UA-3. The following items can be set.

USB Audio (Speaker)	Adjust the volume of the analog outputs (line output and headphone output). The digital output will not change. (*1)
WAVE	Adjust the volume that is output from the audio output device "USB Audio Device." The digital output and analog output will change.
SW Synth	Adjust the volume of the software synthesizer built into Windows.
CD Player	Adjust the "CD Music" volume for the CD-ROM drive of your computer. (*2)

*1 Depending on the version of Windows, this may be displayed as "Analog connector".

*2 If the playback of the CD does not change when you adjust this volume, change the WAVE volume.

NOTE

If **Volume Control** is not installed on your computer, use **Add/Remove Applications** in the **Control Panel** to install it. For details on installation, refer to the Windows owner's manual or Help.

MEMO

The audio quality of the UA-3 will be better if you raise the Volume Control levels.

NOTE

If Mute is checked, or if the slider is in the lowest position, no sound will be output from the UA-3.

NOTE

If you are using Windows 2000 and "CD Player" does not appear, check the [Digital CD playback] item "Enable digital CD audio for this CD-ROM device," as described in the cautionary note on the following page.

When using your computer's CD-ROM drive to play an audio CD, or when playing background music for games with the UA-3

If using Windows Me:

Select **[Start]-[Settings]-[Control Panel]**. In the **[Control Panel]**, double-click the **[System]** icon to access the **System Properties** dialog box. Click the **[Device Manager]** tab, and double-click the **[CDROM]** icon. Below it, double-click the CD-ROM drive that you are using and open its **Properties**. Click the **[Properties]** tab, and select the check box located beside the **Digital CD playback** item "Enable digital CD audio for this CD-ROM device."

If using Windows 2000

In the same way as for Windows Me, open the **System Properties** dialog box. Click the **[Hardware tab]**, and click the **[Device Manager]** button to open the Device Manager. From the CD-ROM drives, double-click the CD-ROM drive that you are using to open its **Properties**. Click the **[Properties]** tab, and select the check box located beside the **Digital CD playback** item "Enable digital CD audio for this CD-ROM device."

If using Windows 98 or Windows 98 SE:

Select **[Start] - [Settings] - [Control Panel] - [Multimedia]**, then click on the **[CD Music]** tab, then check "Enable CD digital audio for this CD-ROM device."

Depending on your computing environment, playback of these CDs may still be impossible. For details, refer to information provided by your computer's manufacturer. If you are using a PC-card (PCMCIA) type CD-ROM drive, playing back WAVE data or an audio CD on the CD-ROM drive may cause the sound to be interrupted, or no sound may be heard at all.

Checking for sound output

After the connections have been made correctly, you can play back the sample data to check your setup.

■ Playing the sample data

Here we will use standard Windows functionality to play the sample data. The sample data is found in the **AUDIO Capture CD-ROM**. Insert the CD-ROM into the CD-ROM drive of your computer.

1. Copy "**Alright(.wav)**" to the desktop by dragging it from the "**Sample_Data**" folder of the CD-ROM.

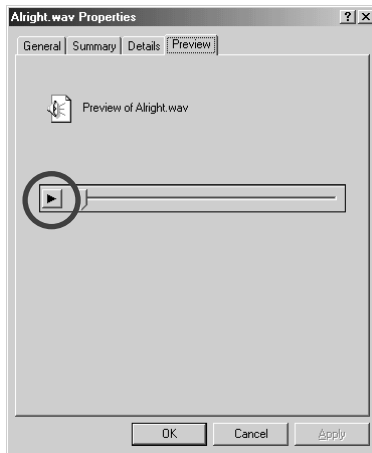

In order to listen to the sample data, you will need approximately 30MB of free space on the hard disk where Windows installed.

2. Right-click the copied file “**Alright(.wav)**”, and select [**Play**] or [**Properties**] from the menu that appears.

3. Click the [**Preview**] tab, and then click the  button. The sample data will begin playing.

Did you hear the sample data?

If the sample data played correctly, your computer and the UA-3 are connected correctly, and the drivers have been installed correctly. If the data did not play correctly, refer to **Troubleshooting** (p. 36). Troubleshooting contains material to help you find and correct such problems.

This completes all connections and driver installation for the UA-3.

MEMO

When the **Recording input select switch** is set to **DIGITAL**, it is not possible to play back audio data from your computer. Set the switch to **INPUT + GUITAR/MIC**.

Deleting the USB Audio Device driver

■ If re-installing the USB Audio Device driver

■ If installation of the USB Audio Device driver was terminated before completion

Use the following procedure to delete the driver that is already installed.

1. Use a USB cable to connect the UA-3 to your computer.
2. Click the Windows **[Start]** button, and select **[Settings]** - **[Control Panel]**.
3. In **[Control Panel]**, double-click **[System]** to open the **System Properties** dialog.
4. Click the **[Device Manager]** tab.
5. Double-click **[Sound, video and game controllers]** to see a list of the devices.
6. From the list, select **USB Audio Device**, and click **[Remove]**. In the **Confirm Device Removal** dialog box, click **[OK]**. If **USB Audio Device** is not displayed, proceed to step 8.
7. Make sure that **USB Audio Device** is not in the **Sound, video and game controllers** list, and click **[Close]** to close the **System Properties** dialog.
8. Follow the steps 1. – 4. again, and double-click **[Universal Serial Bus controllers]** to display the list of devices.
 If **ⓘ** is displayed for the **USB-compatible device icon**:
 Select the **[USB Composite Device]** icon, and click **[Remove]**. In the **Confirm Device Removal** dialog box, click **[OK]**. As in the step 7., close **System Properties**.
 If there is no **USB-compatible device icon**, or if **ⓘ** is not displayed:
 Simply close **System Properties**.
 If you are using Windows Me and **?** is displayed:
 Simply close **System Properties**.
9. Disconnect the USB cable from your computer, and restart Windows.

NOTE

The explanation provided here is for an average Windows system. Depending on your computer, some of the folder names may be different.

MEMO

If a dialog box suggesting that you restart Windows appears at this point, follow the suggestion and restart your computer.

Basic operation of the D-Out Smoother

■ What is the D-Out Smoother?

When audio is played back to a digital device such as MD or DAT connected to the digital output of the UA-3, a certain amount of time is required for the audio output to be locked immediately after audio playback, so that there may be no sound for one or two seconds, or the pitch or tempo may become incorrect. The D-Out Smoother is software that allows the audio to be played smoothly in such situations.

■ Installing the D-Out Smoother

1. Insert the **AUDIO Capture CD-ROM** into your CD-ROM drive.
2. Click the Windows **[Start]** button, and select **[Run...]**.
3. In the **Open:** text box, input “**E:\UA_Util\Setup.exe**” and click **[OK]**.
Alternatively, click **[Browse]**, select the file **[Setup(.exe)]** located in the **UA_Util** folder of the CD-ROM drive, and click **[Open]**.
4. The installer will start up, and the **Choose Setup Language** dialog box will appear. Specify whether you are using the “**English (United States)**” or “**Japanese**” version of Windows, and click **[OK]**.
5. Perform the remainder of the installation as directed by the instructions that appear on-screen.
6. When installation is completed, the **Setup Complete** dialog box will appear. Click **[Finish]**.

This completes installation of the D-Out Smoother.

■ Starting the D-Out Smoother

1. Connect the UA-3 to the USB connector of your computer.
2. Click the Windows **[Start]** button, and in the **[Programs]** menu, click **[D-Out Smoother]**.
3. The D-Out Smoother will start up.
In some cases it may display “**Cannot find USB Audio Device. Check USB cable or select USB Audio Device again.**” when starting. If this occurs, the computer has not correctly detected the UA-3. It is possible that the UA-3 is not connected correctly, or that the driver has not been installed correctly. Refer to **Connections and driver installation (Windows)** (p. 10) and check these points.

MEMO

In this explanation we are assuming that your CD-ROM drive is drive **E:**, but the drive name may be different depending on your computer. If the drive name is different on your computer, input the appropriate drive name. You can check the drive name of your CD-ROM drive by double-clicking the **My Computer** icon.

MEMO

The **Setting** dialog box will appear at the first time when you start up. Make sure that the **Wave-Out Device** shows “**USB Audio Device,**” and click **[OK]**. If two or more USB audio devices are displayed, refer to **Using the D-Out Smoother** (p. 23), and specify the correct device.

■ Using the D-Out Smoother

The D-Out Smoother has an “**ON/OFF**” switch and a “**TEST**” button.

“**ON/OFF**” switch

Normally, you will leave this “**ON**” when using the digital output of the UA-3.

Turn this “**OFF**” when connecting or disconnecting the UA-3.

“**TEST**” button

Click the [**TEST**] button. If the test audio is heard, the D-Out Smoother is operating for that device.

When using two or more USB Audio Devices such as the UA-3 or MA-150U, use this button to select the UA-3 for which the D-Out Smoother will operate. Use the following procedure to make your selection.

1. From the D-Out Smoother [**Control**] menu, select [**Setting**] to access the **Setting** dialog box. (This dialog box will appear automatically the first time the software is started up.)
2. From the pull-down menu, select “**USB Audio Device**” and click [**OK**].
3. Click the [**TEST**] button, and check whether or not the test audio is heard. If the audio is heard, the D-Out Smoother is operating for that device. If the audio is not heard, select a different USB Audio Device in step **2**, and repeat steps **1** through **3**.

Convenient Features

- When [**Register to STARTUP**] is checked in the Setting dialog, D-Out Smoother will automatically start up when you start up the computer.
- When [**Minimize window when starting up**] is checked in the Setting dialog, D-Out Smoother will minimize itself immediately after it starts up, allowing you to use your computer’s screen more effectively.

■ Deleting (uninstalling) the D-Out Smoother

The D-Out Smoother supports the Windows **Add/Remove Programs Properties** function. You can use the following procedure to remove the program if it becomes unnecessary.

1. Click the Windows [**Start**] button, and select [**Settings**] - [**Control Panel**].
2. In [**Control Panel**], double-click [**Add/Remove Programs**] to open the **Add/Remove Programs Properties** dialog box.
3. Click the [**Install/Uninstall**] tab.
4. From the list in the dialog box, click the name of the application that you wish to delete.
5. Click [**Add/Remove**].

The application you specified in step **4** will be deleted.

If you uninstall D-Out Smoother, you should firstly uncheck the [**Register to STARTUP**] in the Setting dialog. You can go to the Setting dialog by selecting [**Control**] - [**Setting**]. (p. 44)

Connections and driver installation (Macintosh)

* If you are a Windows user, refer to p. 10.

In order to use the UA-3, you must first install a driver. UA-3 uses a driver included with Mac OS.

MEMO

What is a driver?

Making connections and installing the driver

■ Making connections

Always make sure to have the volume level turned down before connecting the UA-3. Even with the volume all the way down, you may still hear some sound when the power is switched on, but this is normal, and does not indicate a malfunction.

To prevent malfunction and/or damage to speakers or other devices, always turn down the volume, and turn off the power of all devices before making any connections. (It is not necessary to turn off the power of your computer.) Use a USB cable to connect the UA-3 to your computer before turning on the power of your audio equipment.

NOTE

Before disconnecting the USB cable or restarting Macintosh, please close all applications. You should also turn down the volume of any audio or amp system that is connected.

NOTE

This unit is equipped with a protection circuit. A brief interval (a few seconds) after connecting a USB connector is required before the unit will operate normally.

■ Getting the unit to be recognized

1. Turn on the power of your computer and start up Mac OS.
2. From the **Apple** menu, select the **[Apple System Profiler]**.

3. Click the **[Devices and Volumes]** tab control.
4. Use a USB cable to connect the UA-3 to your computer.
5. To make sure it is successfully recognized, select **[Update all information]** from the **[Commands]** menu. You should see the following three audio devices in the USB section, as shown below:

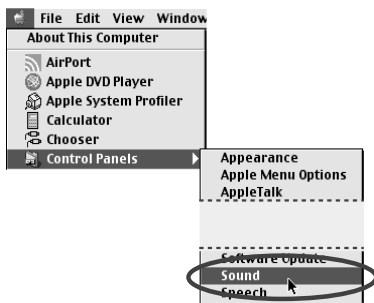

If the indication is correct, the installation of the UA-3 driver is successful. Select **[Quit]** from the **[File]** menu to close the **Apple System Profiler** dialog, then make the sound settings explained below.

If the indication is incorrect, you should try disconnecting the UA-3 from the USB port, and waiting about ten seconds. Then, do the procedure over again, starting from the step 4.

■ Making the sound settings

6. From the **Apple** menu, select **[Control Panels] - [Sound]** to open the **Sound** dialog.

7. Click the **[Speakers]** tab.

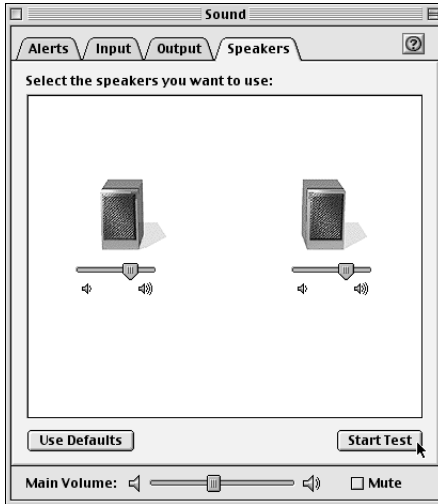

NOTE

To prevent damage to your speakers, turn down the volume on this unit, and on any audio devices you may have connected.

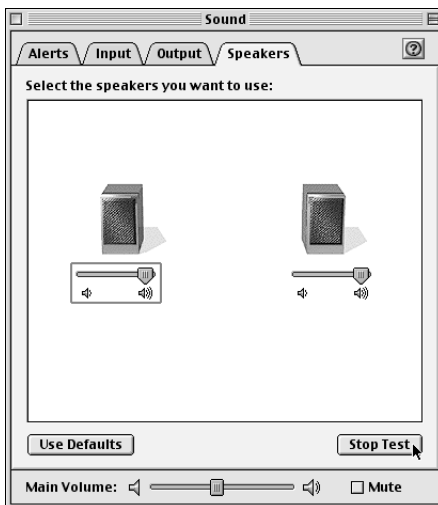

NOTE

Make sure to quit all applications that may be running before you make the connection.

- Turn down the volume on the UA-3, and on your audio equipment, then click **[Start Test]**.

- Test sounds are output from left to right, along with what appears on the screen; adjust the volume using the **[Main Volume]** bar. When you are finished, click **[Stop Test]**.

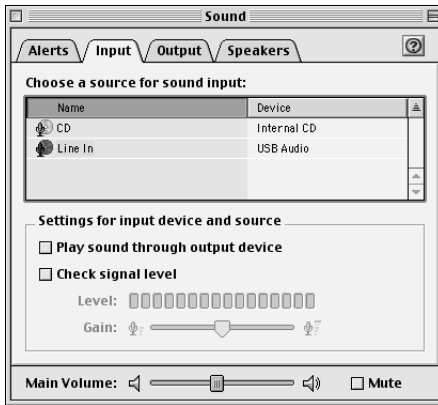

Depend on the your OS version, there is no **[Main Volume]** bar. In that case, use the **[Volume]** bar in the **[Output]** to adjust the volume.

MEMO

If the **Recording input select switch** is set to **DIGITAL**, it is not possible to play back audio data from your computer. Set the switch to **INPUT + GUITAR/MIC**.

10. Select **[Input]** from the **Sound** dialog. Then, in **Choose a source for sound input:**, choose **USB Audio**.

NOTE

If you don't see USB Audio, you should close the **Sound** dialog. Then, disconnect the UA-3, and wait about ten seconds. Then, try doing the procedure over again, starting at number 2.

NOTE Do not check **[Play sound through output device]**.

11. When you have finished making settings, select **[Quit]** from the **[File]** menu to close the **Sound** dialog.

Known issues: UA-3

- Some applications such as Cakewalk's Metro Series and TC Work's Spark Series cannot record/playback at 48 kHz. Please use the UA-3 at 44.1 kHz.
- While the audio application is recording or playing, do not connect/disconnect the USB cable, or move the **Recording input select switch**. Doing so may cause the application to freeze.
- You may hear sound hopping and/or noise when you record and play back at the same time due to high load on the CPU. However, the noise should not be in the recording itself. Such noise should only be found in the playback signal.
- If you are going to use the Virtual Sound Canvas 3, you will need to select **[Performance]** from the **[Setting]** menu, and set the **Expression Mode** to **Response Priority**.
- The standard driver that comes with Mac OS is not ASIO compatible.
- When you start up your computer with the UA-3 connected, the computer may become unstable. If this occurs, start up your computer before connecting the UA-3, and connect the UA-3 after start-up.

Checking for sound output

After the connections have been made correctly, you can play back the sample data to check your setup.

■ Playing the sample data

Here we will use standard Macintosh functionality to play the sample data. The sample data is found in the **AUDIO Capture CD-ROM**. Insert the CD-ROM into the CD-ROM drive of your computer.

1. Copy “**Alright**” to the desktop by dragging it from the “**Sample_Data**” folder of the CD-ROM.
2. Launch **QuickTime Player**, which is provided with the Mac OS. The QuickTime Player is normally located in the **QuickTime** folder within the **Applications** folder of your hard disk.

3. From the [File] menu, select [Open Movie], select the copied file “**Alright**,” and click [Convert] to open it.

4. Click the playback button.
The sample data will begin playing.

Did you hear the sample data?

If the sample data played correctly, your computer and the UA-3 are connected correctly, and the drivers have been installed correctly. If the data did not play correctly, refer to **Troubleshooting** (p. 36). Troubleshooting contains material to help you find and correct such problems.

This completes all connections and driver installation for the UA-3.

MEMO

In order to listen to the sample data, you will need approximately 30MB of free space on the hard disk that contains your system.

MEMO

If the **Recording input select switch** is set to **DIGITAL**, it is not possible to play back audio data from your computer. Set the switch to **INPUT + GUITAR/MIC**.

Appendices

UA-3 Application Guide

This section explains various ways in which the UA-3 can be connected and used.

To prevent malfunction and/or damage to speakers or other devices, always turn down the volume, and turn off the power of all devices before making any connections. (It is not necessary to turn off the power of your computer)

Before you perform digital recording, please read the section entitled **You must read this before you use digital recording** (p. 6).

Digitally recording the output of the UA-3 on MD

Make the connections shown in the following diagram.

* The sampling rate of the UA-3's digital output is 44.1kHz. Audio data of a sampling rate other than 44.1kHz will be automatically converted within a computer to 44.1kHz, and will be output from the digital output connectors of the UA-3.

Depending on the application that you are using on a Windows machine, when the digital output of the UA-3 is connected to a digital device such as MD and audio is playing, a certain amount of time may be required immediately after playback ends for the digital audio output to be locked, so that there will be no sound for one or two second, or the tempo or pitch may be wrong. If this occurs, you can use the "D-Out Smoother" software included in the CD-ROM to make the audio sound smoothly. For details refer to **Basic operation of the D-Out Smoother** (p. 22).

If you change the position of the **Recording input select switch**, you should turn down the volume of any monitor speaker system that is connected.

■ Digital transfer from CD/MD/DAT to your computer (digital recording)

Make connections as shown in the following diagram.

* Set the recording sampling frequency of your recording application to 48 kHz if you are using DAT, or to 44.1 kHz if you are using MD or CD. For details refer to your application's manual.

If the Recording input select switch is set to DIGITAL, audio data from your computer will not be output.

Since the UA-3 supports SCMS (p. 6), audio data containing copy protected song that is input to the digital connector cannot be recorded by the UA-3 to your computer. (It will be output from the line output jacks and the headphone jack.)

If you wish to input from the Line input jacks, Mic input jack or Guitar input jack, refer to p.31 -- 34. On the UA-3, it is not possible to mix the signal from these inputs with the signal from the digital input connector and record them together.

If you change the position of the Recording input select switch, you should turn down the volume of any monitor speaker system that is connected.

■ Recording the line inputs (analog recording)

Make connections as shown in the following diagram.

NOTE

If you change the position of the **Recording input select switch**, you should turn down the volume of any monitor speaker system that is connected.

Use the **Line input adjustment slider** to adjust the input level. If the LED above the slider lights red, use the slider to lower the input level. You will be able to record with higher audio quality if you use the slider to adjust the level so it is as high as you can get it before causing the LED to light.

■ Recording guitar sounds

When recording guitar sounds with a sequencer or similar device, only the guitar sounds are recorded as you play the guitar along with the sounds of the computer's audio data.

Make connections as shown in the following diagram.

NOTE

The signal input from the **Guitar input jack** is not directly output to the **Digital output connector**.

NOTE

If you change the position of the **Recording input select switch**, you should turn down the volume of any monitor speaker system that is connected.

Set the recording sample rate of your recording application to the desired setting. (The available sample rates will depend on your application. For details refer to the owner's manual for your application.) Available sampling frequencies vary depending on the operating system used.

Use the **Guitar/Mic input adjustment slider** to adjust the input level. If the LED above the slider lights red, use the slider to lower the input level. You will be able to record with higher audio quality if you use the slider to adjust the level so it is as high as you can get it before causing the LED to light.

■ Recording narration or vocal sounds

Make connections as shown in the following diagram.

Set the recording sample rate of your recording application to the desired setting. (The available sample rates will depend on your application. For details refer to the owner's manual for your application.) Available sampling frequencies vary depending on the operating system used.

Use the **Guitar/Mic input adjustment slider** to adjust the input level. If the LED above the slider lights red, use the slider to lower the input level. You will be able to record with higher audio quality if you use the slider to adjust the level so it is as high as you can get it before causing the LED to light.

NOTE

CONDENSER MIC

The UA-3 supports small multimedia microphones used for adding narration, and is compatible with plug-in powered monaural microphones.

NOTE

Howling could be produced depending on the location of microphones relative to speakers. This can be remedied by: 1. Changing the orientation of the microphone(s). 2. Relocating microphone(s) at a greater distance from speakers. 3. Lowering volume levels.

NOTE

If you change the position of the **Recording input select switch**, you should turn down the volume of any monitor speaker system that is connected.

■ Recording guitar mixed with the line inputs

With these settings, the guitar will be mixed with the line inputs and recorded on your computer.

Make connections as shown in the following diagram.

NOTE

It is not possible to simultaneously record both a digital source (such as CD) and an analog source (such as guitar or mic). Either use the included software to record them separately, or record the digital source first and then record the analog source as described in **Recording guitar sounds** (p. 32).

NOTE

If you change the position of the **Recording input select switch**, you should turn down the volume of any monitor speaker system that is connected.

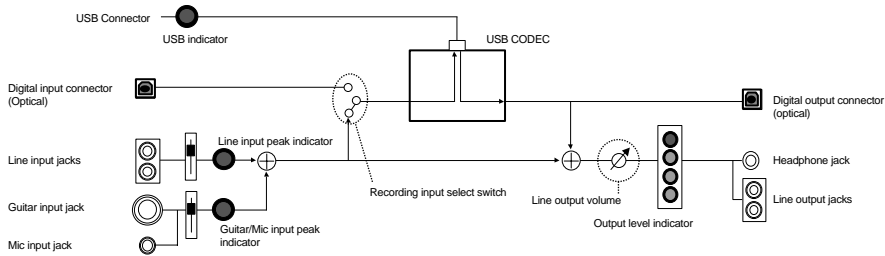

Set the recording sample rate of your recording application to the desired setting. (The available sample rates will depend on your application. For details, refer to the owner's manual for your application.)

Use the **Line input adjustment slider** and **Guitar/Mic input adjustment slider** to adjust the balance. If the LED above the slider lights red, use the slider to lower the input level. If you use the slider to adjust the level so it is as high as you can get it before causing the LED to light.

Troubleshooting

If an unexpected problem occurs while using the UA-3, please read this chapter first. It provides numerous hints that will help you solve problems.

The problems covered in the troubleshooting section are organized according to the operating system on which the problem might be encountered. Use the icon shown at the left of the title to find the information you need.

Problems common to both Windows and Macintosh

Problems that occur only on Windows

Problems that occur only on Macintosh

If you are using computer for the first time, or do not understand the explanation of a procedure, refer to the owner's manuals for your computer or for OS.

If the UA-3 does not operate as you expect, check the following points.

Problems related to the USB driver

“Add New Hardware Wizard” does not start up automatically

“Add New Hardware Wizard” terminates before completion

- **When the USB cable is connected or disconnected, approximately 15 seconds (or more) may be required for the UA-3 to be recognized.**

- **Is the USB cable connected correctly?**

Make sure that the UA-3 and computer are connected correctly by the USB cable.

- **Can USB be used on your computer?**

Refer to the owner's manual for your computer, and make sure that it is able to use USB.

- **Does your computer or USB hub have sufficient power supply capacity?**

The UA-3 cannot be connected if insufficient power is supplied to it. Check whether one of the following cases apply.

If you are using the UA-3 with a notebook computer that is running on its battery, operation may be unreliable with some models of computer. If this is the case, connect the AC adaptor to your notebook computer.

The power conservation mode of your computer may limit the power that is supplied to USB. Check the settings of your computer.

In some cases, the UA-3 cannot be used with a bus-powered hub (a hub that does not contain a power supply). Please use a self-powered hub (a hub that contains a power supply).

- **Does your computer meet the USB specifications?**

If you are using a computer that does not meet the USB specifications (such as a homemade computer), operation may be unstable. In such cases, you may be able to solve the problem by connecting a USB hub that contains a power supply.

- Is “Unknown Device” displayed for “Other devices” or “Universal Serial Bus controllers”? Use the following procedure to delete “Unknown Device” from “Other devices” (Universal serial bus controller), and re-start your computer.

In order to check whether or not the “Unknown Device” is the UA-3, disconnect the USB cable of the UA-3, and verify that “Unknown Device” has disappeared. Then connect the UA-3 once again, and delete “Unknown Device.”

1. In the Windows **Control Panel**, double-click [**System**] to open the **System Properties** dialog box.
2. Click the [**Device Manager**] tab.
3. Double-click [**Other devices**] (Universal Serial Bus controllers) to see the list of devices.
4. In the list, select **Unknown Device** and click [**Remove**].
5. In the **Confirm Device Removal** dialog box, click [**OK**].
6. Make sure that the list does not show **Other devices** or **Unknown Device**, and click [**Close**] to close the dialog box.

The “Add New Hardware Wizard” dialog box appears even though you installed the drivers

If your computer or USB hub has two or more USB connectors, connecting the UA-3 to a USB connector to which the UA-3 has never before been connected may cause the **Add New Hardware Wizard** dialog box will appear even though the drivers have already been installed. Install the drivers once again as described in **Connections and driver installation (Windows)** (p. 10). This is not a malfunction.

Drivers are not installed correctly

Use the procedure described in **Deleting the USB Audio Device driver** (p. 21) to delete the USB Audio Device driver installed in your computer, and install the UA-3 drivers once again as described in **Connections and driver installation (Windows)** (p. 10). Check whether there is an item named “Unknown Device” in “Other devices” or in “Universal Serial Bus controllers.” If you find “Unknown Device,” delete it.

A dialog box saying “Unknown Device found” appears, and I can’t install the driver

Depending on your computer, not all of the Windows 98 files required to support audio over USB may have been installed when the computer was shipped. Please check with the manufacturer of your computer.

Problems when using the UA-3

OS becomes unstable

- Starting up a computer when the UA-3 is already connected may cause the computer to become unstable.

If this occurs, start up the computer with the UA-3 disconnected, and then connect the UA-3.

■ No sound

- **Is the UA-3's Recording input select switch set to "INPUT + GUITAR/MIC"?**

When the **Recording input select switch** is set to "DIGITAL," the audio signals input to the digital Input connector are output. The computer's audio data is not output.

- **Is a digital device such as an MD connected to the digital output of the UA-3?**

Depending on your application, playing audio with a digital device such as an MD connected to the digital output of the UA-3 may cause a certain amount of time to be required for the digital audio output to be locked immediately after playback, so that there will be no sound for one or two seconds. If this occurs, you can use the **D-Out Smoother** software from the included CD-ROM to make audio play smoothly. For details, refer to **Basic operation of the D-Out Smoother** (p. 22).

- **Are you attempting to use the CD player of your computer to play an audio CD?**

If you wish to play an audio CD on the CD-ROM drive of your computer, refer to **When using your computer's CD-ROM drive to play an audio CD, or when playing background music for games with the UA-3** (p. 19).

- **Are you running multiple applications?**

If multiple applications are running simultaneously, an error message may appear. If this occurs, click **[OK]**, and close the other applications.

Even if an application window is closed, it is still running if it remains in the taskbar, so be sure to quit any unneeded applications shown in the taskbar.

- **Have you specified the audio data output destination for OS?**

The audio data output destination for a computer must be set to **UA-3**. For details on this setting, refer to **Specifying the audio input/output device** (Windows p. 17) or **Making the sound settings** (Macintosh p. 25).

- **Have you specified the audio data output destination for your playback software?**

For some software such as Cool Edit Pro LE, you must set the audio data output destination as **UA-3**. For details on this setting, refer to the owner's manual for the software.

- **Have the drivers been installed correctly?**

In order to playback audio data using the UA-3, the **USB Audio Device** driver must be installed. For details on installation and settings, refer to **Connections and driver installation** (Windows p. 10, Macintosh p. 24).

- **Are the various Volume Control faders raised?**

Adjust the volume of each fader as described in **Volume Control settings** (Windows p. 18) or **Making the sound settings** (Macintosh p. 25).

■ Sound is distorted

- **Does the peak indicator light red?**

If you are inputting sound from the line input jacks, use the **Line input adjustment slider** of the UA-3 to reduce the input level. If you are inputting sound from the Guitar or Mic input jacks, use the **Guitar/Mic input adjustment slider** to reduce the input level. Also, the number of LED's in the output level indicator will change according to the output level of the UA-3. If the red LED lights, use the line output volume to lower the volume.

The volume level of the instrument connected to LINE IN is too low.

- **Could you be using a connection cable that contains a resistor?**
Use a connection cable that does not contain a resistor.
- **Is the Line Input adjustment slider (p. 9) raised appropriately?**

■ Noise is heard when playing back audio

- **Is a mic still connected?**

If a mic is connected to the UA-3, use the **Guitar/Mic input adjustment slider** to lower the input level.

- **The graphic accelerator of your computer may cause noise to occur during audio playback.**

Use the following procedure to set graphic acceleration to "None."

1. In the Windows **Control Panel**, double-click [**Display**] to open the **Display Properties** dialog box, and click the [**Settings**] tab.
2. Click [**Advanced**] to open properties, and click the [**Performance**] tab.
3. In **Graphics**, move the **Hardware acceleration:** slider to **None**, and click [**OK**].
4. In the **Display Properties** dialog box, click [**OK**] to close the dialog box.

Then restart your computer.

- **Noise is heard in the line input or mic input**

If a MIDI sound module and the UA-3 are connected via USB to the same computer, and the output of the MIDI sound module is connected to the line input jacks of the UA-3, noise from the computer may enter via the MIDI sound module and be heard from the UA-3. In such cases, use a self-powered hub to connect the MIDI sound module and the UA-3 in parallel, or connect the MIDI sound module via the serial interface or MIDI interface.

- **Noise may be heard if you record and play back simultaneously.**

If you record and play back simultaneously, the playback may be interrupted depending on the performance of the system, and this may be heard as noise. However since priority is given to recording, the recorded data will not be lost.

• **This problem may be solved by properly grounding the chassis of your computer, or the ground prong of the plug on the AC power cord that was supplied with your computer. Also, make sure that there are no devices nearby that emit a strong magnetic field, such as a television or a microwave oven.**

- **Are a large number of audio devices connected?**

If a large number of audio devices are connected, noise may occur. Do not connect audio devices that you are not using.

■ Sound is interrupted during audio playback

- **Try increasing the memory**

You can increase the processing power of your computer by adding more memory. For details on adding memory, refer to the owner's manual for your computer.

- **Does your computer fulfill the USB specifications?**

The audio may be interrupted if you are using a computer that does not electrically meet the USB specifications. In this case, the problem may be solved if you connect a USB hub that contains its own power supply.

- **Are numerous applications running?**

If you use numerous applications during playback, or start up another application, the playback may be interrupted depending on your computer system. Exit all unneeded applications, and try again. If this does not solve the problem, try restarting a computer.

- **Try making the following changes to the disk drive settings.**

* *The following settings may not exist on your computer.*

1. In the Windows **Control Panel**, double-click [**System**] to open the **System Properties** dialog box, and click the [**Device Manager**] tab.
2. Double-click [**Disk drives**] to see the list of devices.
3. From the list, select **GENERIC IDE DISK TYPExx**, and click [**Properties**] to access the **GENERIC IDE DISK TYPExx Properties** dialog box.
 - * *The "xx" in **GENERIC IDE DISK TYPExx** will be a number that will differ depending on your system.*
4. Click the [**Settings**] tab, check the [**DMA**] check box in the **Options**, and click [**OK**] to close the dialog box.
 - * *Depending on your system, a dialog box for DMA settings may appear. After checking the contents, click **OK** or **Cancel**.*
5. In the **System Properties** dialog box, click [**OK**] to close the dialog box.

Restart your computer so that the above settings will take effect.

■ Audio playback stops

- **On some computers, the Power Management settings in the Control Panel may cause audio playback to stop.**

The Power Management Properties that are displayed when you double-click Power Management will differ depending on your computer system. One example is given below, but you should consult the owner's manual for your computer as well. Some computers may not have the following settings.

1. In the Windows **Control Panel**, double-click [**System**] to open the **System Properties** dialog box, and click the [**Device Manager**] tab.
2. Double-click [**System devices**] to see the list of devices.
3. From the list, select [**Advanced Power Management support**], and click [**Properties**] to access the **Advanced Power Management support properties** dialog box.
4. Click the [**Settings**] tab, and in **Troubleshooting**, check the [**Disable power status polling**] check box. Then click [**OK**].
5. In the **System Properties** dialog box, click [**OK**] to close the dialog box.
6. Restart Windows.

Digitally recorded sound is distorted, pitch changes or contains noise

- If you are using a long digital cable, noise may occur or the sound may be distorted when it is connected. Use digital cables that are one meter (about a yard) or shorter.
- Does the sampling frequency setting in the application match the sampling frequency of the digital device connected to the digital input connector?
- When using digital recording, it is not possible to record in monaural. Set your recording software to the “stereo” setting.

Noise is present in the recorded sound

- It has been found that noise tends to be introduced in sound recorded on the iMac series models, which were released after the summer of 2000.
- In the SimpleSound application that is included with MacOS, noise will be heard in the sound if it is played back immediately after being digitally recorded. Save the sound first, then try playing it back.
- Update the USB Audio driver to 1.0.5f4.

If the USB Audio driver, which is provided with the Mac OS, is under 1.0.4, update it to 1.0.5f4.

You can download the driver from the URL below:

<http://asu.info.apple.com/swupdates.nsf/artnum/n11703>

Checking the USB audio driver's version

1. Connect the UA-3 to the computer.
2. From the **Apple** menu, select [**Apple System Profiler**].
3. Click the [**Devices and Volumes**] tab.
4. In the USB section, the screen will indicate “**Audio (UA-3 USB Audio Device)**.” Click the arrow at the left of this text.
5. The number displayed to the right of “**Driver version**” is the version of the USB audio driver.

■ A blank (silent) file is created when you record

- Try setting the bit rate to “16bit.”

If you are using Windows98 Second Edition, and your recording software is set to a bit rate of 8 bits, a blank file may be created, so that you may not be able to record effectively. If this occurs, you will be able to record correctly by setting the bit rate to “16 bit”.

- Data that contains the SCMS flag cannot be recorded digitally.

The UA-3 supports SCMS (p. 6), so that if SCMS-flagged data (such as data from an MD that was digitally copied from a commercial music CD) is input to the digital connector, the UA-3 will not be able to record this on the computer. (The sound will be output from the line output jacks and the headphone jack.)

Cannot record digitally

- Is the Recording input select switch set to “DIGITAL”?
- Is the application set to the same sampling frequency as that of the digital device connected to the digital input connector?
- Recording will no longer be possible if you switch the sampling frequency (for example, between digital broadcast A mode and B mode) of a device while it remains connected to the digital input connectors.

When switching the sampling frequency, you need to disconnect, then reconnect the digital cable.

- It is not possible to record digital data of a format other than consumer digital audio device format.

Cannot Record Music CD

- The UA-3 cannot record music CDs in the computer’s CD-ROM drive with CoolEdit Pro LE or other programs.

To record music CDs in the computer’s CD-ROM drive, you need to first select your computer’s sound card as the **audio device** (Waveform Record) that is to be used for recording by CoolEdit Pro LE (or the application you are using), then you can proceed with recording. When recording a music CD with a sound card, uncheck “Enable digital CD audio for this CD-ROM device” you checked in **When using your computer’s CD-ROM drive to play an audio CD, or when playing background music for games with the UA-3** (p. 19).

The volume changed when you resumed from Suspend or Hibernation status

- When Windows 2000 resumes from Suspend or Hibernation, the output volume setting is changed due to a problem of Windows.

Start up the Mixer application as described in **Volume Control settings** (p. 18), and adjust the **USB Audio (Speaker)** slider.

Game background music does not sound

- Does the game use an audio CD for background music?

If an audio CD is used to provide background music for the game, refer to **When using your computer’s CD-ROM drive to play an audio CD, or when playing background music for games with the UA-3** (p. 19).

Problems common to software in general

Can't install

- **Is the included CD-ROM inserted into the CD-ROM drive of your computer?**
- **During installation, were the CD-ROM drive name and the installation file name input correctly?**
- **Is there sufficient space on your hard disk?**

Increase the free space on your hard disk. Delete unneeded files (move them to the Recycle Bin), and then right-click on the Recycle Bin and select **Empty Recycle Bin**.

Alternatively, you can add another hard disk to your system.

For details on installing a hard disk, refer to the owner's manuals for your computer and for Windows.

- **Were other applications running when you performed the installation?**
Exit all applications, and perform the installation again.

Can't start up an application

- **Are numerous applications running?**

It may be that there is not enough memory to start up another application. Close all unneeded applications, and then start up the new application. If an error is still displayed, try restarting your computer.

An error is displayed when you start up an application

- **If multiple applications are started up simultaneously, an error message may appear.**

If this occurs, click [OK], and close all unnecessary applications.

Even if an application window has been closed, the application is still running if it remains in the taskbar. Be sure to close any unnecessary application that appears in the taskbar.

- **If you are using Cakewalk Pro Audio, you must be sure that the sampling frequency of Cakewalk Pro Audio is set to 44.1kHz.**

On Cakewalk Pro Audio 7, 8, and 9, the sampling frequency can be set as follows.

[Tools] - [Audio options] - [Settings] - [Default sampling rate]

An Application hangs up

When using digital music software for digital recording with the UA-3's recording input switch set to **DIGITAL**, be absolutely sure that a digital device is connected.

Although in certain applications, Windows limitations may render the operation of the mouse or other such devices inactive until a digital device is connected, this does not indicate any malfunction.

If no action results from the use of the mouse or other such devices, then reconnect the digital device.

- **Confirm occurrence of the above with the following applications**

(current as of January, 2001).

- Logic Audio 3.0 or 4.0 During Recording
- Cubase VST 3.7 During Startup/Recording/Playback
- Cubase ASIO Multimedia Setup During Testing

Confirm that the events or conditions above do not occur with the following applications.

- Cakewalk Pro Audio 7, 8, and 9
- CoolEditProLE
- SoundRecorder (Bundled with Windows98)

A shortcut error appears when starting up Windows

If you uninstall the D-Out Smoother with the **Register to STARTUP** checked (p. 23), the following error message will appear when you start up Windows. In this case, click **[NO]** to close the message.

Use the following procedure to delete this message.

1. Click the Windows **[Start]** button, and select **[Settings]** - **[Taskbar & Start Menu]**.
2. Click the **[Start Menu Programs]** tab, then click **[Remove]**.
3. Select **[Programs]** - **[StartUp]** - **[SmoothDo]**, and click **[Remove]**.
