

HALion 3.0

HALion 3.0 -new features overview

- All new realtime FX, like: Reverb, Phaser, Talkbox, Delays, EQ, BitCrusher, AutoWahWah and much more (27 FX total)
- Flexible new routing management: Insert effects can be applied to individual samples and sample groups, entire programs. Effect sends can also be sent directly to the VST mixer
- RAMSave™ technology: HALion 3 dynamically scans through an entire project, and unloads any sample from the computer's RAM that isn't needed. Samples can be reloaded by one mouse-click.
- Sleek new GUI – all important sound shaping parameters come together on one page for even easier editing without switching pages
- New Browser with Drag & Drop support for easy loading and importing of programs and samples, including Favorites to jump fast between often used locations.
- Browser, Modulation, Megatrig and Alternate view can be opened simultaneously in a separate resizable Window
- Autobrowse function in the Browser shows only Folders on your harddrive that contain supported File Types
- Sound Categorization system: categorize your sounds to find needed sounds on your harddrive in seconds
- New database functions allow you to index all Sound Content on all your hard drives simultaneously and search by Keywords and Categories!
- New HALionSoundBank File Format (*.HSB): HALion can now save all its Samples and Programs into one big file for easy Backups and never missing a Sample again!
- Stacking and layering of programs is now only one mouse click away
- All new Alternate Mode for most realistic Drum Sounds or String-bow up/down movement emulation, etc. (during repetition a different sample with a slight variation will be played with each new note on message)
- Second-Strike Technology allows overlapping Notes of the same pitch to play different Samples
- Sample Start offset can now be modulated by any Modulation source
- New Voice Allocation Algorithm + Legato Modes
- Up to 256 freely configurable outputs per instance
- Advanced drag&drop and auto-mapping of Samples in the Keyzone
- 4 Program Global Velocity curves
- Freely assignable MIDI Controllers
- Additional Sound Content
- G5 optimized
- Import of Toast, Kurzweil, Kontakt and Zero-X BeatCreator
- Standalone + AudioUnit (AU OSX only) version
- Many small enhancements and Fixes!
